Researcher: Prof Paul Griffiths

Magnetic resonance imaging to enhance the diagnosis of fetal developmental brain abnormalities in utero. MERIDIAN Add on study

Why Have I been given this extra information?

You should already have a copy of the patient information sheet (MERIDIAN Add-on Study Participant information sheet option 1 v2.0 22.04.2014) which covers the essentials about the research. We have given you this extra information because you, or the medical staff caring for you, have told us that there are some concerns about your baby's development. We understand that any questions about your baby's health from minor concerns to conditions with serious health implications are very worrying and stressful and we wish you and your family well.

Is the MRI scan of the brain only?

We need to make clear to you that this research is for the brain only and we will only be scanning your baby's brain. If you do decide to take part we will check that you understand this. Please do think carefully about taking part, and you might want to talk it over with your partner, family or doctor. Whether or not you decide to take part in the research will not affect your care in any way.

Contact for further information

If you would like further information about the study, please contact Professor Paul Griffiths:
