10 top tips for communicating a diagnosis of mesothelioma

Provide consistency and continuity in terms of who the patient sees and what is said.

Ensure that staff involved in

communicating a diagnosis of

mesothelioma have specialist

knowledge and training in

mesothelioma, as well as

communication skills. Training should be

ongoing with access to regular updates.

2

Involve the Clinical Nurse Specialist throughout, starting as early as possible in the diagnostic pathway.

Be patient-centred when communicating a diagnosis. Take cues from the patient and family in balancing what information to give and when. Use language that is easy to understand. Don't just rely on written information and booklets.

Provide a quiet and private environment to facilitate communication.

Be direct and honest whilst maintaining hope where possible, for example by providing information about appropriate treatments, symptom management and trials.

Prepare and plan as a team before communicating a diagnosis of mesothelioma. This should include the communication of a plan for ongoing management and treatment to the patient and family carer.

Based on the results of the RADIO Meso Research Project conducted by the University of Sheffield and funded by Mesothelioma UK

7

Ensure the patient feels they have

been allocated sufficient time.

Make the patient feel like the most important person in the room, and at the centre of the communication process.

9

Use available expertise and resources. No single clinician should carry the responsibility of communicating a diagnosis on their own. Best practice is often from partnership working with different services and quality resources.
